

Neptune 360 1.4.5.3 Release Notes

Neptune is pleased to announce release 1.4.5.3 of Neptune 360 – the cloud-hosted data management platform from Neptune.

This release includes bug fixes and new features for displaying active and inactive status on Customer Inquiry and the Endpoint Consumption report.

System Requirements

- Neptune 360
 - Google Chrome (67.0+); Microsoft Edge (42.17134+)
- Neptune 360 Mobile
 - iOS (10.3.1+); Android (5.1+)
- Neptune 360 Sync
 - Windows (7+)
 - Processor: 2 GHz or faster
 - Memory: 4GB
 - Hard disk space: at least 1.5 GB available

New Features

- Endpoint Consumption Report – This report provides a listing of Daily or Hourly readings and consumption for an endpoint for the date range provided.
- Account/MIU Status Display - The status of the Account and the MIU, along with the install and deactivation dates, have been added to the Customer Inquiry search results. This will easily allow for determining which account/MIU is currently active.

Enhancements and Bug Fixes

- Added Privacy Policy to Neptune 360 About section of the UI
- System Consumption KPI performance improvements
- Import performance improvements
 - As part of this, the import progress screen will not update total imported counts until the import has completed processing
- Fixed: Handling of duplicate meter number records
 - If multiple records on import have the same meter number but unique meter size or meter key or read sequence then a unique meter will be created with appropriate details and reflected on export
- Persist “Search By” selection on Customer Inquiry
- Fixed: Handling 07000000 as an invalid read
- Fixed: Show reading on Active Account instead of Inactive Account
- Fixed: 500 Error When Requesting Token from /token API

- Fixed: Speed Issue with Continuous Consumption and Major Reverse Flow KPI
- Fixed: Gateway KPI Showing "0" Despite Collectors Sending in Readings
- Fixed: No Flow Flags Not Showing Up in 360 on N_SIGHT PLUS conversion accounts
- Fixed: Correct Active Dates within More Meters
- Fixed: Duplicate Accounts on Reports After Merging Routes
- Fixed: Inactive Accounts in 360 Despite MIU Being Active in Import File
- Fixed: Adjust timing of Received KPIs to match logic used in Complete Readings KPI
